

MOTUEKA

the new wave.

Motueka Est. 1996.

A taste so new,
it never gets old.

Motueka (Mor-too-ek-a) is a zesty, limey hop that rode a new wave of hop craft when we first released it back in 1996, and continues to ride that wave today.

An aroma hop with a distinctive fresh crushed citrus “Mojito” lime character.

Total Oils 0.8-1.4%

MIKE SUTHERLAND, SAWMILL BREWING CO NZ

This is a workhorse in our brewery, like using lime with food the citrus characteristic in this hop makes your entire hop load pop out of the glass. It's versatility means we can use it across the spectrum of styles from light lagers to robust IPA's. It's extremely effective combined with some of NZ's other unique hops, particularly Riwaka and Nelson Sauvin to give a distinctively New Zealand flavour.

APPLICATIONS

Brings a new world edge to a wide range of styles from traditional pilsners to lighter lagers to big ales. The weight of oil to alpha integrates it fully with higher gravity types to balance both malt sweetness and body. Extremely versatile in the brewery.

BREWING

An outstanding hop in many applications from first kettle additions through to late gift. A unique aroma and flavour profile for producing bigger styles. Excellent when used in multiple additions from a single hop bill and sits well on the palate to balance speciality malt sweetness.

BREEDING

A seedless triploid aroma type developed by the New Zealand's Plant & Food Research. Motueka™ has both European (Saaz) and North American ancestry.

TECH SPECS

%	Mean	Range
Alpha Acids	7.0	5.5-10.0
Beta Acids	5.4	4.5-6.5
Cohumulone	29.0	28-31
Total oils	1.0	0.8-1.4
Myrcene	65.0	60-69
Caryophyllene	1.2	0.8-1.8
Farnesene	8.0	6-10.0
Humulene	3.5	1.0-5.0
B-pinene	0.8	0.7-1.0
